

CLEAN SHIPPING INDEX

Website: www.cleanshippingindex.com

PRESENTATION

The Clean Shipping Network association is a non-profit organization consisting of committed cargo owners who jointly put environmental requirements on carriers and shipping companies.

Clean Shipping Index, a shipper's tool for measuring the environmental footprint of shipping of products across the world's oceans.

The evaluation tool Clean Shipping Index is used when procuring transport services by all participating members. Detailed environmental data from ships and shipping companies is gathered through an online questionnaire into the Clean Shipping Index database.

PARTICIPATION IN EUROPEAN PROJECTS/NETWORKS

Clean Shipping Index is labelled as an EU flagship project for the Baltic Sea Region.

In 2014 we aim to promote CSI amongst stakeholders from the Baltic Sea Region.

EXPECTATION CONCERNING THE VASCO DA GAMA PROJECT:

Institutionalization of environmental ideas, interests and considerations starts with having the right knowledge about environmental impacts and how to mitigate these. By contributing to the development of a master course for sustainable shipping, we enhance the environmental development in the maritime sector, which is the core aim of our organization.
